

Step A: The palette, as a ColorScheme

Role	Hex	Used for
primary	#2563EB	App bar, active states, selected filter pills and day tabs, bottom nav selected item
onPrimary	#FFFFFF	Text and icons on primary
secondary	#0C2FB8	Highlights, + + Add buttons, Calendar task dots
onSecondary	#FFFFFF	Text and icons on secondary
surface	#FFFFFF	Dialogs and other white areas
onSurface	#1E1E1E	Body text and headings
error	#DC2626	Validation and destructive actions (Delete)
onError	#FFFFFF	Text and icons on error
success (stored as tertiary)	#4ADE80	Completed status badge
onSuccess (stored as onTertiary)	#1E1E1E	Text on the Completed badge
primaryContainer	#7DA3F5	Pending status badge
onPrimaryContainer	#0C2FB8	Text on the Pending badge
secondaryContainer	#7AA0F4	Subject pills on notes
onSecondaryContainer	#052B80	Text on subject pills
surfaceContainerHighest	#DCE4FA	Class, task, note and calendar event cards

Contrast check: #1E1E1E text on #FFFFFF background = 16.67:1 → passes the required 4.5:1.

Dark mode: Light only for the MVP. Dark mode is a stretch goal.

Step B — Type Scale as a TextTheme

Your style	Flutter slot	Size	Weight	Used for
Heading	headlineSmall	24 px	Bold	Screen titles
Body	bodyMedium	16 px	Regular	Normal text and descriptions
Caption	labelSmall	12 px	Regular	Dates, timestamps, hints
Button	labelLarge	14 px	Bold	Button labels and actions

Font family: Poppins (loaded with the google_fonts package), used for all text styles.

Step C — Spacing as Constants

- **Base unit:** 8px
- **Screen edge padding:** 16px
- **Gap between list items:** 8px
- **Gap between sections:** 24px

Step D — Components as Files

Component	File	Constructor parameters	Appears on
AppBar	lib/widgets/app_header.dart	String title, String? subtitle (the Dashboard tagline)	All five screens
BottomNavBar	lib/widgets/bottom_nav_bar.dart	int currentIndex, ValueChanged<int> onTap	All five screens
FilterPills	lib/widgets/filter_pills.dart	List<String> options, String selected, ValueChanged<String> onSelected	Class Schedule (days), Task, Notes (subjects)
ClassCard	lib/widgets/class_card.dart	String subject, String day, String time, String room, VoidCallback? onEdit, VoidCallback? onDelete (null hides Edit/Delete)	Dashboard, Class Schedule
TaskCard	lib/widgets/task_card.dart	String title, String subject, String dueDate, bool completed, ValueChanged<bool>? onChanged, VoidCallback? onEdit, VoidCallback? onDelete (null onChanged shows the Pending/Completed badge only)	Dashboard, Task
CalendarEventCard	lib/widgets/calendar_event_card.dart	String title, String date, String subject, bool completed (built from a Task)	Calendar
NoteCard	lib/widgets/note_card.dart	String title, String subject, String content, String	Notes

		dateCreated, VoidCallback onEdit, VoidCallback onDelete	
--	--	--	--

Step E: The theme file, assembled (bonus)

```

1 import 'package:flutter/material.dart';
2 import 'package:google_fonts/google_fonts.dart';
3
4 class AppSpacing {
5   static const double sm = 8, md = 16, lg = 24;
6 }
7
8 class AppTheme {
9   static const _ink = Color(0xFF1E1E1E);
10
11   static const _scheme = ColorScheme(
12     brightness: Brightness.light,
13     primary: Color(0xFF2563EB),
14     onPrimary: Colors.white,
15     secondary: Color(0xFF0C2F88),
16     onSecondary: Colors.white,
17     surface: Colors.white,
18     onSurface: _ink,
19     error: Color(0xFFDC2626),
20     onError: Colors.white,
21     tertiary: Color(0xFF4ADE80),
22     onTertiary: _ink,
23     primaryContainer: Color(0xFF7DA3F5),
24     onPrimaryContainer: Color(0xFF052880),
25     secondaryContainer: Color(0xFF7AA0F4),
26     onSecondaryContainer: Color(0xFF052880),
27     surfaceContainerHighest: Color(0xFFDCE4FA),
28   );
29
30   static TextStyle _t(double size, FontWeight w) =>
31     TextStyle(fontSize: size, fontWeight: w, color: _ink);
32
33   static final lightTheme = ThemeData(
34     useMaterial3: true,
35     colorScheme: _scheme,
36     scaffoldBackgroundColor: Colors.white,
37     textTheme: GoogleFonts.poppinsTextTheme(
38       TextTheme(
39         headlineSmall: _t(24, FontWeight.bold),
40         bodyMedium: _t(16, FontWeight.normal),
41         labelSmall: _t(12, FontWeight.normal),
42         labelLarge: _t(14, FontWeight.bold),
43       ),
44     ),
45     appBarTheme: AppBarTheme(
46       backgroundColor: _scheme.primary,
47       foregroundColor: _scheme.onPrimary,
48     ),
49     elevatedButtonTheme: ElevatedButtonThemeData(
50       style: ElevatedButton.styleFrom(
51         backgroundColor: _scheme.secondary,
52         foregroundColor: _scheme.onSecondary,
53         minimumSize: const Size.fromHeight(44),
54         shape: RoundedRectangleBorder(borderRadius: BorderRadius.circular(8)),
55       ),
56     ),
57     chipTheme: ChipThemeData(
58       selectedColor: _scheme.primary,
59       showCheckmark: false,
60       secondaryLabelStyle: TextStyle(color: _scheme.onPrimary),
61     ),
62   );
63 }

```

What Changed, and Why

Element	Prelim said	Now says	Why it changed
Colors used by the mockup	Only the main palette was listed	Added secondary use, success as tertiary, and container roles for cards, badges and pills	The mockup uses light-blue cards, badges and pills that need their own colors. All of them are ColorScheme roles, so the document and theme.dart match.
Font	Not named	Poppins through google_fonts	The mockup uses Poppins, so the TextTheme loads it once for the whole app.
Component parameters	Callbacks were required	Callbacks are optional (nullable); AppHeader has a subtitle	The Dashboard shows the same cards in a compact form without Edit/Delete buttons, and needs a tagline.
FilterPills	Not listed	New shared widget	The same pill row appears on three screens.
